

**Automatic hydraulic screen filters, suitable to all the applications and a wide range of filtration grades, with the guarantee of AZUD quality.**

There are solutions to work with pressures higher than 10 bar / 145 psi or saline water. Battery control unit included.

## TECHNOLOGY

**AZUD LUXON filters keep without interruption the supply of filtered water during the flushing cycle.**

The water comes into the system (1) and enters in the filtering element.

Afterwards, the water goes through the screen (2), so the particles are retained in the internal side of the filtering element. The water already filtered continues to the outlet manifold (3).

When there is an increase of the differential of pressure, the flushing cycle starts. A hydraulic valve is opened in the outlet of the drainage, which provokes the suction in the endings of the inner nozzles (4). These, together with a helical movement along the screen, suck the filtered particles. The dirtiness is expelled by the drainage.

The time of this process is pre-established by the control unit. When it finishes, the flushing cycle valve closes and the process ends with minimal water consumption.

## ADVANTAGES

- ✓ **Energetic efficiency:** The consumption in the flushing cycle is minimal.
- ✓ **Wide filtration range:** Grades from 80 to 1.000 micron.
- ✓ **Versatility:** Range from 2" to 6".
- ✓ **Resistance:** Temperature until 60°C.
- ✓ **Wide filtering surface:** until 4.800 cm<sup>2</sup>
- ✓ **Resistant material:** The screen is made in stainless steel of high quality resistant to corrosion.
- ✓ **Time saving:** The filtration process continues simultaneously to the flushing cycle.
- ✓ **Easiness in the installation:** The filters are delivered ready to be installed.

## MATERIAL

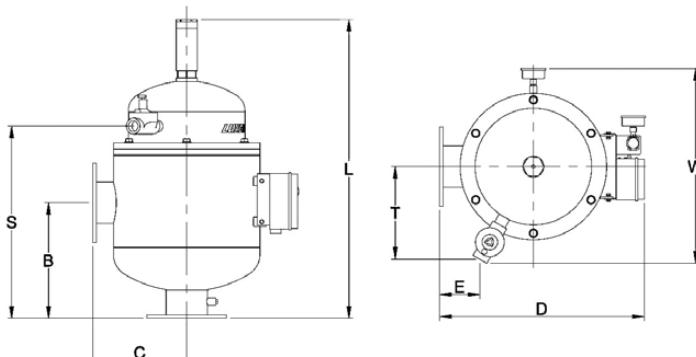

Housing of the filter	Carbon steel epoxy-polyester coated (S-235-JR EPOXY-POLYESTER coated)
Filtering element	Stainless Steel AISI-316-L. PVC Structure
Sealing elements	NBR
Drainage Valve	Polypropilene

Battery control unit included.  
**Max. Pressure** 10 bar / 145 psi • **Min. pressure** 2,5 bar / 36,3 psi  
**Max. temperature** 60°C / 140 F

The flow rate given by filter conditions the frequency of the flushing activation.  
Maximum recommended flow rate: 125 micron and water good quality.  
Min. flushing pressure: 2,5 bar / 36,3 psi in outlet manifold.

Ask for other filtration grades.
